

BADGR Bolt

Hi, welcome to ***BADGR Bolt***.

BADGR Bolt is a precision speed reading app that uses RSVP (Rapid Serial Visual Presentation) and ORP (Optimal Recognition Point) to help you read faster with better comprehension.

Getting Started

When you open BADGR Bolt, you will see the main navigation bar at the bottom of the screen with four tabs, from left to right:

- Library
- Stats
- Settings
- Account

Adding Your First Book

1. Go to the **Library** tab. This is where all of your books and documents live.
2. Look toward the bottom-right corner of the screen and tap the **+** button.
3. A sheet will appear showing the supported formats: **TXT, PDF, EPUB, DOCX, and IMAGE**.
4. Choose the format you want to import (for example, PDF).
5. Android will open a system file picker. From here you can browse Google Drive, local storage, or other apps to find your file.
6. Select the document. BADGR Bolt will import it and add it to your Library.
7. Once it appears in the Library list, tap the book to open it, then press the **play** button to start speed reading.

Reading Controls

While reading, BADGR Bolt flashes words at the center of the screen using RSVP with the ORP highlighted. Your eyes stay still while the words move.

Key controls include:

- **Words per minute (WPM):** Adjust your reading speed. Lower values slow down; higher values speed up. BADGR Bolt supports roughly 60–1200 WPM.
- **Words at a time:** Choose between 1 and 4 words per frame. If you use more than 2 words, consider increasing the font size so the text does not feel cramped.
- **Punctuation pauses:** Configure longer pauses at sentence endings (periods, question marks, exclamation points) and shorter pauses at clause breaks (commas). This keeps your reading rhythm natural.

Fonts, Colors, and Themes

Go to the **Settings** tab to personalize the reading experience.

You can:

- Change the font size to what feels comfortable.
- Choose from several high-quality fonts such as system defaults, JetBrains Mono, Literata, Merriweather, Atkinson Hyperlegible, and Open Sans.
- Pick an ORP highlight color that is comfortable for your eyes.
- Switch the app theme between **System**, **Light**, and **Dark** modes, with options designed to be accessible for users including those who are color blind.

Stats, Achievements, and Bolt Rank

The **Stats** tab shows how you are improving over time. BADGR Bolt tracks words read, session time, average WPM, and more. It also includes a **Bolt Rank** system and achievements so you can see your progress and stay motivated.

Account and Pro Features

The **Account** tab is where you manage sign-in and Pro features.

- BADGR Bolt is offline-first. You can use the core reader without an account.
- Creating an account and upgrading to Pro enables cloud sync for your books and reading progress across devices and removes free-tier limits.

- During the beta, users who activate Pro may receive lifetime Pro access, as configured by BADGRTechnologies LLC.

Summary

Everything you need is at the bottom of the screen: **Library, Stats, Settings, and Account**. Add books with the + button, tune your speed and layout, and let BADGR Bolt help you read more, faster, without losing comprehension.
